PROFILE

Software engineer with 4 years shipping production systems across web, desktop and mobile. Front-end leaning and strongest in React and TypeScript, with back-end work in .NET. Owned the design-token and theming architecture for a hedge fund's in-house trading desktop on OpenFin, built its shared error-handling components, and extended its .NET service gateway. Previously shipped healthcare apps to iOS and Android and an airport self-service ticketing kiosk.

SKILLS

Languages: TypeScript, JavaScript, C#

Front-end: React, Redux Toolkit, RTK Query, Zod, Vue 3, Nuxt, Pinia, Vuex, Tailwind CSS, Storybook, design tokens

Platforms: Web, Desktop (OpenFin), iOS and Android (React Native, Expo)

Back-end: .NET (REST APIs, service gateway), Node.js, REST API design and integration

Testing & delivery: Vitest, Testing Library, MSW, Storybook component tests, CI test gating, npm package versioning, feature flags, Vercel

EXPERIENCE

Rocketfin

Malta / Remote

Full Stack Developer – client: London-based hedge fund

May 2025 – September 2026

- Built the fund's in-house trading desktop on OpenFin as part of a 10-person team, across three codebases: the launcher, the app suite it hosts, and a shared component library.
- **Design-token architecture (owner):** designed the layered token system (OKLCH palettes, semantic tokens, per-component tokens) behind three themes (brand, light, dark). It ships in the shared component library, consumed by the launcher and app suite, and unified typography and spacing across all three codebases.
- **Tailwind v3 → v4 migration:** migrated the shared library first, then the launcher and app suite: replaced the JS config with CSS tokens, dropped Sass, and swapped JS colour maths for CSS `color-mix()` so charts follow the theme.
- **Desktop platform engineering:** built window state persistence across restarts, multi-window layout constraints and tab overflow handling, plus the CSS side of runtime theme switching (including the OpenFin window chrome) and root font-size density modes (compact, default, comfortable).
- **Shared error-handling components:** built a render error boundary plus a separate loading/error overlay for async query failures (which boundaries can't catch), HTTP error screens (401/403/404/504) that adapt to container size, and RTK Query error normalisation.
- **Back-end (.NET):** extended the .NET service gateway with REST endpoints, response schema changes and query filter operators.
- **Testing:** wrote unit tests for every feature I shipped (Vitest, Testing Library, MSW) and helped stabilise browser-based Storybook tests that run as a CI gate.

Threls Ltd

Xewkija, Gozo, Malta

Front-end Developer

Aug 2022 – Apr 2025

- **Malta Transfer airport kiosk:** sole front-end engineer on a self-service ticketing kiosk at Malta International Airport, built from scratch in Vue 3, TypeScript, Tailwind and Pinia; launched in 2024.
- **Digimed (healthcare):** shipped a cross-platform patient app to web, iOS and Android (React Native, Expo, TypeScript, Redux) with OpenTok video consultations and Google Maps.
- **Weavr.io migration:** migrated a production fintech application from Nuxt 2 to Nuxt 3 and Vuex to Pinia, resolving breaking changes across the codebase.
- Also delivered: an elderly-care mobile app (React Native, Redux Toolkit), the KSU career-finder (Nuxt 2, Chart.js), Guatemala donation forms, and CMS and portfolio sites.

Keen Ltd

Xewkija, Gozo, Malta

Apprentice Web Developer (part-time)

Feb 2019 – Jun 2022

- Built custom WordPress themes from scratch with the Roots Sage framework, Laravel Blade and Tachyons CSS.

EDUCATION

BSc (Hons) in IT (Software Development), MCAST

Oct 2019 – Jun 2022

Advanced Diploma in IT (Multimedia Software Development), MCAST

Oct 2017 – Jun 2019
