PROFILE

Software engineer with 4 years shipping production systems across web, desktop and mobile. Owned the design-token and theming architecture for a capital-markets trading desktop on OpenFin, and built its shared error-handling components and .NET gateway endpoints. Previously shipped healthcare apps to iOS and Android and an airport self-service ticketing kiosk. Strongest in TypeScript and React; building back-end depth in Node.js.

SKILLS

Languages: TypeScript, JavaScript (ES6+), C#, HTML5, CSS3

Platforms: Web, Desktop (OpenFin), iOS and Android (React Native, Expo)

Back-end: Node.js, .NET (REST APIs, service gateway), REST API design and integration

Front-end: React, Redux Toolkit, RTK Query, Zod, Vue 3/2, Nuxt, Pinia/VueX, Tailwind CSS, Storybook, design tokens

Testing & delivery: Vitest, Storybook component tests, end-to-end testing, CI test gating, npm package versioning, feature flags, Git, Vercel

EXPERIENCE

Rocketfin

Malta / Remote

Front-end Developer – client: capital markets

May 2025 – September 2026

- Trading desktop platform on OpenFin across three codebases: the launcher, the application suite it hosts, and a shared component library.
- **Desktop platform engineering:** built window state persistence across restarts, multi-window layout constraints and tab overflow handling.
- **Back-end:** extended the .NET service gateway with REST endpoints, response schema changes and query filter operators.
- **Shared error-handling components:** built a render error boundary plus a separate loading/error overlay for async query failures (which boundaries can't catch), HTTP error screens (401/403/404/504) that adapt to container size, and RTK Query error normalisation.
- **Design-token architecture (owner):** designed the layered token system (OKLCH palettes, semantic tokens, per-component tokens) behind three themes (brand, light, dark) in a shared component package consumed by the launcher and app suite; unified typography and spacing across all three codebases.
- **Theming and density:** built the CSS side of runtime theme switching, including the OpenFin window chrome, and root font-size density modes (compact, default, comfortable).
- **Tailwind v3 → v4 migration:** migrated the shared package first, then the launcher and app suite: replaced the JS config with CSS tokens, dropped Sass, and swapped JS colour maths for CSS `color-mix()` so charts follow the theme.
- **Testing:** wrote a large share of the launcher's unit tests (Vitest, Testing Library, MSW) and helped stabilise browser-based Storybook tests that run as a CI gate.

Threls Ltd

Xewkija, Gozo, Malta

Front-end Developer

Aug 2022 – Apr 2025

- **Malta Transfer airport kiosk:** sole front-end engineer on a self-service ticketing kiosk at Malta International Airport, built from scratch in Vue 3, TypeScript, Tailwind and Pinia; live since 2024.
- **Digimed (healthcare):** shipped a cross-platform patient app to web, iOS and Android (React Native, Expo, TypeScript, Redux) with OpenTok video consultations and Google Maps.
- **Weavr.io migration:** migrated a production fintech application from Nuxt 2 to Nuxt 3 and VueX to Pinia, resolving breaking changes across the codebase.
- Also delivered: an elderly-care mobile app (React Native, Redux Toolkit), the KSU career-finder (Nuxt 2, Chart.js), Guatemala donation forms, and CMS and portfolio sites.

Keen Ltd

Xewkija, Gozo, Malta

Apprentice Web Developer (part-time)

Feb 2019 – Jun 2022

- Built custom WordPress themes from scratch with the Roots Sage framework, Laravel Blade and Tachyons CSS.

EDUCATION

BSc (Hons) in IT (Software Development), MCAST

Oct 2019 – Jun 2022

Advanced Diploma in IT (Multimedia Software Development), MCAST

Oct 2017 – Jun 2019
